

PaperCut - Confirm the Number of Pages to Print

The Metropolia printing systems checks the number of pages to be printed. This is meant to prevent the printing of wrong Excel spreadsheets etc.

The user is asked to confirm that the print job is correct. We recommend that you check the number of pages in the print job.

When the number of pages exceeds 100, the user is asked to confirm the print job.

The image shows a 'Print Job Notification' dialog box. At the top, it has a title bar with a green icon and the text 'Print Job Notification'. Below the title bar, there is a logo on the left and the text 'Print Job Notification' and 'Confirm the print and select the print action' on the right. A 'Printing Guide' link is also visible. The main area is titled 'Print job details' and contains three input fields: 'Document name' with the value '1969_Charger_Coronet_Dart_Service_Manual.pdf', 'Printer' with the value 'papercut\\Canon Color Print A4', and 'Pages' with the value '250 (Grayscale)'. To the right of the 'Pages' field is a 'Cost' field with the value '10.00€'. Below these fields, there is a red warning message in Finnish: 'Tulostamasi dokumentti on yli 100 sivua. Varmistathan dokumentin koon, kiitos.' and its English translation: 'This print job is over 100 pages. Please confirm the total size of the job.' At the bottom right, there are two buttons: 'Print' and 'Cancel'.

Print job details	
Document name	1969_Charger_Coronet_Dart_Service_Manual.pdf
Printer	papercut\\Canon Color Print A4
Pages	250 (Grayscale)
Cost	10.00€

Tulostamasi dokumentti on yli 100 sivua. Varmistathan dokumentin koon, kiitos.

This print job is over 100 pages. Please confirm the total size of the job.

Print **Cancel**

When the number of pages exceeds 50 on network printers, the user is asked to confirm the print job.

If an Excel spreadsheet of just a few pages results in a print job of hundreds of pages, you should cancel the print job and check the document.

In the picture above, the number of pages is circled in green. If the number is correct, select **Print**. The print job is then created in the print queue.

If you need help

To protect users and their print jobs we have set the multifunction printers so that print jobs are deleted from the queue if there is a malfunction at the printer.

The running out of paper or ink or other such supply is also considered a malfunction here.

If you run into a problem with printing, please make a [service request](#).
