

Creating a Password

How to create a strong password

- A password should be easy to remember but hard to guess.
- A password must be sufficiently long, at least 8 characters.
- A password must consist of lower case letters, upper case letters, numbers, and special symbols.
- A password must never be a word that can be found in a dictionary, a person's name, etc.

Do not use the same password in Metropolia's services as you use in other services. In the worst case, a data breach that occurs in another service could lead to a data breach in a Metropolia service.

Also, don't use these world's most common passwords:

- 123456
- 123456789
- picture1
- password
- 12345678
- 111111
- 123123
- 12345
- 1234567890
- senha
- 1234567
- qwerty
- abc123
- Million2
- 000000
- 1234
- iloveyou
- aaron431
- password1
- qqww1122
