Adobe related printing problems

Below are solutions to printing related problems in Adobe software
Print as PDF

Printing InDesign's and Illustrator's own format usually fails, no matter what paper dimensions have been carefully selected. An easy solution to this problem is to save the work in pdf file format and then print it.
Illustrator

Navigate to **File** menu and select **Save As**. Select from the **Save as type:** drop-down menu **Adobe PDF (*.PDF)**.

InDesign

A pdf file can be saved by selecting **Export** from the **File** menu. **Adobe PDF (Interactive)** is usually preselected in the **Save as type:** drop-down menu, but there is the **Adobe PDF (Print)** option as well that gives more choices. Normally, the default selection is enough.

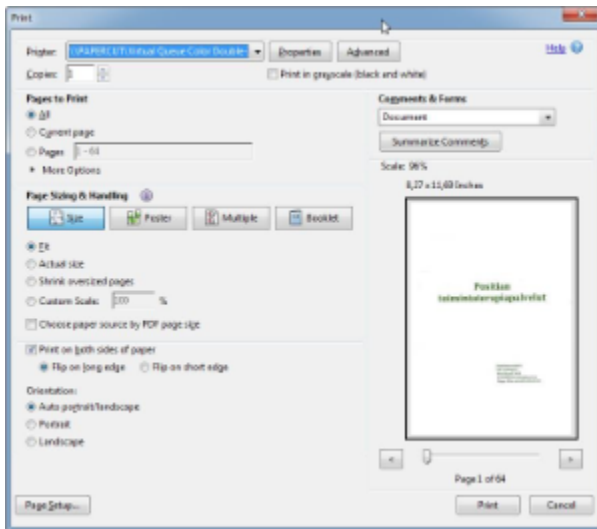

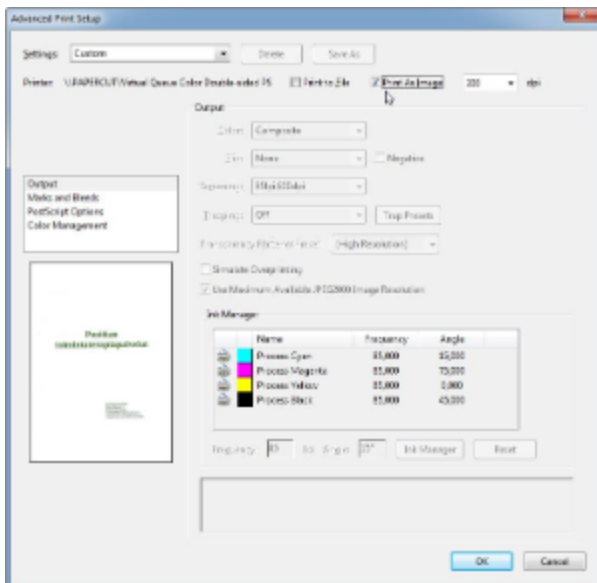

PDF won't print?

Print As Image

Adobe Acrobat/Reader

Navigate to your print settings by selecting **Print** in **File** menu. Choose the desired printing settings and then click on **Advanced:**

Select **Print As Image**, then close the window with **OK** and **Print**.
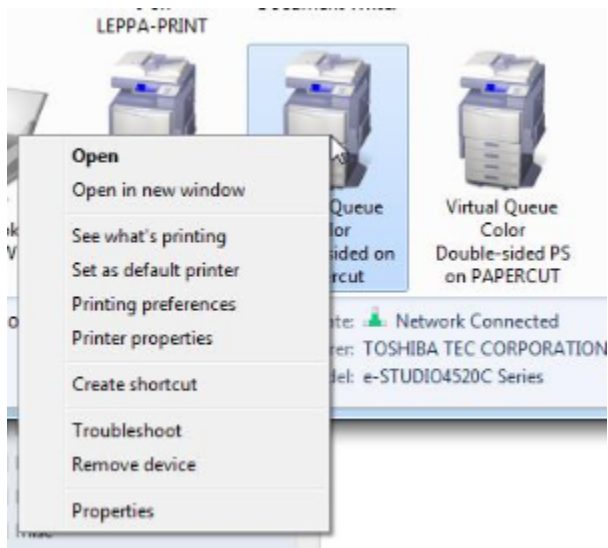

PhotoShop and Windows

PhotoShop 6 will always send printouts to the Windows default printer, no matter which printer the user has selected through the program. The solution is to change the system's default printer.

Change your default printer

Click on **Start** and select **Devices and Printers**. Right-click your preferred printer and click on **Set as default printer**.

Printing on MFPs

An easy way to make sure the printouts are the desired ones is to check from the MFP's panel how many pages are in queue and what is the price. Log In to the MFP and navigate to your job list. If you wanted colour A3-sized printouts and the cost is only 12 cents, it means that it will print in B&W. The colour printout for A3-size papers is 28 cents.

Price list can be seen from Copy fee chart 2013
